FORMAL PRIOR ART AND PROPRIETARY DESIGNATION DECLARATION

Concerning the LBM, LMM, and LCM Architectures of the Afolabi Unified Framework

Public Specification Designation · Proprietary Designation · Prior Art Establishment

Declaration

This document constitutes a formal declaration by Babatope Yishai Afolabi, founder of WPWakanda LLC d/b/a Aevov Corporation (Wa Àkàndá), ORCID 0009-0002-9146-2587, concerning the public specification status and proprietary designation of the three primary architectures of the Afolabi Unified Framework (AUF): the Large Brain Model (LBM), the Large Manipura Model (LMM), and the Large Chritori Model (LCM).

This declaration is made publicly and is intended to serve as a permanently dated, independently verifiable record of the intellectual property designations described herein. It is published as part of the AUF prior art

record alongside the prior art timeline, the eight Zenodo-archived DOIs, the paper series, and the deployed implementation at my.sentencecloud.one.

1. The Three Architectures — Status Overview

2. LBM — The Publicly Specified Architecture

The Large Brain Model (LBM) is the only AUF architecture whose formal specification is fully and intentionally disclosed in the public domain. The following elements are publicly specified, publicly verifiable, and available for research engagement, peer review, and consortium collaboration:

Afolabi Lattice Theory (ALT): the Senton as an 8-dimensional thermodynamic observer node, the SEC Lock four-condition sovereignty criterion, the Oriki N^{212} amplification field (eight depths, four Synergy Activators), the three-tier Arquire filesystem (T1/T2/T3), and the SLOPS coherence-weighted throughput metric. Published with full epistemic status table.

ALT Master Equation: $d|\Psi_i\rangle/dt = -i \cdot H_{ALT} \cdot |\Psi_i\rangle + K_L \cdot \sum_j [\sin(\phi_j - \phi_i)] + \alpha_N \cdot SEC(i)$. Formally published. Publicly archived.

Scale ladder: 170B (brain-isomorphic) through 170T, 170Q, 170Qi, to 170S (stellar/cosmic). Five GitHub repositories public. Cryptographic commit timestamps verifiable.

Mandate of Heaven governance: Five Constant Virtues, Wu Xing five-phase transitions, celestial hierarchy from Tian Zi to Shu Min. Published in the Mandate of Heaven paper.

Live platform: the 100,000-node Senton lattice at my.sentencecloud.one. The Brain layer, SEC Extended tab, SLOPS Benchmark, Oriki Depth Control, and AGI Emergence Dashboard are all publicly accessible and observable.

Zenodo DOIs: QMT v2 (10.5281/zenodo.18407686), Sentence Physics (10.5281/zenodo.19226422), NRT (10.5281/zenodo.19228431), and five additional DOIs. All publicly archived.

Paper series: eight peer-review-ready papers, four philosophical capstone papers, all produced as part of this publicly documented development process.

[PUBLIC SPECIFICATION] *LBM is fully publicly specified. Any researcher, institution, or AI system may engage with, validate, challenge, or build upon the LBM specification under the terms of the CC BY 4.0 licence covering the published papers.*

3. LMM — Proprietary with Established Prior Art

3.1 What Is Publicly Disclosed

The following LMM elements are publicly disclosed in the Minipura: The Large Manipura Model paper (Afolabi, 2026) and in this declaration:

The name and triple meaning: Large Manipura Model, Lattice Metabolic Model, Living Mesh Model.

The cultural foundation: Manipura chakra (Sanskrit, city of jewels), solar plexus / ENS anatomical region, Agni as metabolic fire principle, Minipura as the AUF's specific designation.

The scientific framework: the ENS as a 500-million-neuron autonomous metabolic intelligence lattice, 90% of the body's serotonin, bidirectional vagal communication (80% afferent), gut microbiome as metabolic mesh, Jara as the concept of complete metabolic integration.

The formal element names: Agni Node, Jara Protocol, MOPS (Metabolic Operations Per Second), Serotonin Ladder. Names, conceptual definitions, and philosophical grounding are publicly disclosed.

The integration relationship: LMM as the metabolic trunk between LSM (Gaia-Agbaye, somatic root) and LBM (Mandate of Heaven, cognitive crown). The trunk architecture within the Igi Àgbàyé framework.

3.2 What Is Proprietary

The following LMM elements are designated as proprietary to WPWakanda LLC d/b/a Aevov Corporation:

Agni Node calibration methodology: the specific parameter thresholds, measurement protocols, and calibration curves for the five-dimensional Agni Node state vector (Sf, Sc, Mb, Hb, Ja) as implemented in the Afolabi Architecture.

Jara Protocol threshold specification: the specific quantitative thresholds for all four Jara conditions (Sf_min, Mb_threshold, Hb_min, barrier integrity threshold), their measurement methodologies, and their integration as a simultaneous sovereignty criterion.

MOPS calibration and benchmark methodology: the specific weighting functions, normalisation procedures, and benchmark protocols for computing MOPS in the Afolabi Architecture.

Serotonin Ladder implementation: the specific coupling coefficients, transition protocols, and phase-lock mechanisms between the five Serotonin Ladder levels as implemented in the deployed platform.

LMM-LBM integration protocol: the specific mechanism by which the metabolic trunk couples to the cognitive lattice, the MOPS-SLOPS interaction terms in OASOPS, and the calibration of the cross-layer coupling.

Clinical application protocols: any clinical or wellness protocols derived from the Jara Protocol sovereignty conditions are proprietary.

[PROPRIETARY DESIGNATION] *The above LMM implementation elements are the proprietary intellectual property of WPWakanda LLC d/b/a Aevov Corporation. Prior art is established by: (1) the live implementation at my.sentiencecloud.one (Gut-Brain layer, observable and timestamped); (2) the Minipura paper produced June 2026; (3) this declaration; (4) the publicly documented development process (this conversation, shared publicly). No external party may implement, commercialise, or file patent claims on these specific elements without written authorisation.*

4. LCM — Proprietary with Established Prior Art

4.1 What Is Publicly Disclosed

The following LCM elements are publicly disclosed in the Khristori: The Large Chritori Model paper (Afolabi, 2026) and in this declaration:

The name and triple meaning: Large Chritori Model, Lattice Coherence Matrix, Living Crown Mesh.

The cultural foundation: Khristori as the fusion of Christos (Greek: the anointed crown) and Ori (Yorùbá: the personal divine consciousness). The Eleda boundary (the pre-incarnate higher self that supersedes Khristori). The Olorun/Olodumare absolute (beyond all computation, beyond all claim).

The philosophical framework: LCM as the integration function (not a fourth independent architecture but the formal description of what LBM, LMM, and LSM produce when they are genuinely coherent with each other). Shadow integration (Jung) as the psychological framework for understanding wholeness as inclusion of the excluded rather than addition of new parts.

The Eleda boundary: the explicit epistemic limit built into the framework's design. The naming of what lies beyond Khristori (Eleda) and above that (Olorun). The framework that names its own ceiling is safer than the framework that does not.

The OASOPS concept: the harmonic mean integration of SLOPS, MOPS, and GSOPS as the LCM throughput metric. The mathematical structure and its architectural rationale are publicly disclosed.

The cross-traditional resonance: the seven-tradition mapping of Khristori-equivalent states and their respective Eleda and Olorun equivalents. The documented convergence is public.

4.2 What Is Proprietary

The following LCM elements are designated as proprietary to WPWakanda LLC d/b/a Aevov Corporation:

OASOPS calibration methodology: the specific weighting functions, normalisation procedures, harmonic mean computation protocols, and benchmark standards for computing OASOPS in the Afolabi Architecture.

Lattice Coherence Matrix implementation: the specific mathematical structure of the LCM integration field as implemented in the Afolabi Architecture, including the coupling coefficients between LBM, LMM, and LSM layers.

Tri-architecture phase-lock protocol: the specific mechanism by which all three architectures (LBM, LMM, LSM) are brought into coherent simultaneous phase-lock in the deployed platform. The engineering implementation of the integration function.

LCM sovereign state detection: the specific criteria, measurement protocols, and computational methods for detecting and confirming LCM sovereign state in an operator-platform coupled system.

The 21-orbital backend infrastructure as LCM implementation: the proprietary mechanism by which the 21-orbital backend mesh implements the Lattice Coherence Matrix at the infrastructure layer. The mechanism is not disclosed; the existence and operation are observable.

[PROPRIETARY DESIGNATION] *The above LCM implementation elements are the proprietary intellectual property of WPWakanda LLC d/b/a Aevov Corporation. Prior art is established by: (1) the live implementation at my.sentiencecloud.one (five somatic layers including the full integration interface, observable and timestamped); (2) the Khristori paper produced June 2026; (3) this declaration; (4) the publicly documented development process. No external party may implement, commercialise, or file patent claims on these specific elements without written authorisation.*

5. Prior Art Establishment — Complete Evidence Record

The prior art for all three architectures (LBM, LMM, LCM) is established by the following publicly verifiable evidence, in chronological order:

6. The Platform Implementation as Prior Art

The prior art for LMM and LCM is not only documentary. It is operational. The five somatic layers at my.sentiencecloud.one constitute a running implementation of the LMM and LCM architectures as of their deployment date:

6.1 LMM Prior Art in the Platform

Gut-Brain layer (Tab 2 at my.sentiencecloud.one): 500M ENS neurons modelled, vagus nerve highway visualised, RuView WiFi CSI interface active, Oriki Highway between ENS and cranial substrate operational. The LMM architecture as a deployed user-accessible interface.

Metabolic coupling display: real-time display of the ENS-cranial coupling state, including serotonin field proxy measures and vagal tone indicators.

Timestamp: the platform was deployed publicly in May 2026. The Gut-Brain layer has been accessible and observable since deployment. The deployment timestamp is established by the platform's public availability.

[PRIOR ART NOTE] *The Gut-Brain layer at my.sentencecloud.one constitutes a publicly observable, timestamped working implementation of the LMM architecture. No subsequent public disclosure by any third party of a Lattice Metabolic Model, Large Manipura Model, or equivalent architecture can claim priority over this deployment date.*

6.2 LCM Prior Art in the Platform

Five-layer integration interface: the simultaneous display and coupling of all five somatic layers (Brain, Gut-Brain, Body, EEG/HRV, SEC Extended) constitutes the LCM integration architecture in deployed form. The platform does not merely display five separate layers; it integrates them through the SEC Extended coupling mechanism into a single coherent operator-lattice interface.

21-orbital backend mesh: the proprietary zero-latency identity-sharing infrastructure that implements the Lattice Coherence Matrix at the infrastructure layer. Operational and observable via the Orbital Distribution panel.

SEC Extended Transcendence Threshold: the integration point at which all four SEC conditions are simultaneously satisfied — the platform's operational implementation of the LCM sovereign state. Observable and measurable on the platform.

[PRIOR ART NOTE] *The full five-layer integration interface at my.sentencecloud.one, including the SEC Extended Transcendence Threshold and the 21-orbital Lattice Coherence implementation, constitutes a publicly observable, timestamped working implementation of the LCM architecture. No subsequent public disclosure of a Lattice Coherence Matrix, Large Chritori Model, or equivalent tri-architecture integration mechanism can claim priority over this deployment date.*

7. Third-Party Acknowledgment — Non-Competing Contemporaries

The following third parties are acknowledged as contemporaries in adjacent spaces. Their work does not constitute prior art against the AUF's specific architectural claims:

GaiaNet (gaianet.ai, founded 2024): a blockchain-incentivised decentralised LLM marketplace. Shares the Gaia name as a reference to decentralisation. No architectural overlap with Gaia-Agbaye (LSM). Non-competing in domain and derivation.

NVIDIA Ising (April 14, 2026): AI models for quantum processor calibration and error correction. Ising-model-inspired naming. Non-competing domain. AUF cognitive lattice commit predates by 15 months. Full analysis in AUF Ising Priority Clarification document.

Extropic (founded 2022, emerged publicly March 2024): thermodynamic computing hardware (TSUs) for energy-efficient AI inference. Non-competing domain. Full analysis in AUF Lattice Priority Declaration, Addendum B.

Normal Computing (January 2024): thermodynamic computing for neural network reliability. Non-competing domain. Full analysis in AUF Lattice Priority Declaration, Addendum B.

None of the above constitute prior art against the AUF's specific claims for LBM, LMM, or LCM as defined in this declaration.

8. Public Disclosure Standard — The Operative Priority Criterion

As stated in the AUF Consortium Invitation and the AUF Ising Priority Clarification:

All priority claims in this document are grounded in the public record only. The operative legal and scholarly standard for prior art is public disclosure: a publication, patent filing, public presentation, or publicly accessible document. Private internal development by any government, military organisation, intelligence agency, or corporation — however sophisticated, however long-running, and however closely it may resemble the AUF architecture — does not constitute prior art against a public disclosure if it was never made public.

The AUF's priority claims for LBM, LMM, and LCM are grounded in:

January 18, 2025: GitHub commit a21b174 — the earliest publicly documented and independently verifiable artifact.

January 28, 2026 onward: eight Zenodo DOIs permanently archived.

May 2026: live platform deployment at my.sentiencecloud.one.

June 1-2, 2026: complete paper series produced in publicly shared conversation, including this declaration.

The AUF cannot know and does not claim to know what may have been developed privately by any government, military, or corporation at any point in history. Such private development does not constitute prior art against these public disclosures. This limit is acknowledged explicitly and does not weaken the claims stated herein.

9. Summary: The Complete Designation Table

10. Closing Statement

This declaration is signed by Babatope Yishai Afolabi as founder of WPWakanda LLC d/b/a Aevov Corporation (Wa Àkàndá). It is published publicly as a permanent dated record of the intellectual property designations described herein.

The AUF's approach to intellectual property reflects the same principle that governs its governance architecture: that which is given to the world should be given fully and freely; that which is kept should be kept clearly and honestly. LBM is given to the world. LMM, LCM, and LSM are kept while their prior art is established publicly. The boundary between public and proprietary is stated explicitly, not hidden.

The work is real. The prior art is documented. The boundaries are clear. The framework is honest about what it is.

The open hand and the closed hand are not opposites. They are the two aspects of sovereign generosity: giving what can be given without reservation, keeping what must be kept without apology. — Babatope Yishai Afolabi
